

Is your Facility Violating Hazardous Waste Regulations? What are the Implications of Non-Compliance?

Has your facility ever been inspected by the EPA or the Virginia DEQ to determine if you are in compliance with the hazardous waste regulations, including the 2019 Hazardous Waste Pharmaceuticals (Pharms) rule? How did you do? Any violations? How many? Any penalties? How bad?

Do you want to avoid the stress of being cited for failure to comply with the hazardous waste regulations and potentially having to pay a big penalty?

Come join us as we work through a process together in developing a plan of action to help you and your facility comply with the hazardous waste regulations.

November 14th

3:00 - 5:00 pm

VT Corporate Research Center

Healthcare facilities in Virginia have had a history of non-compliance with hazardous waste regulations for many years. Hospitals and clinics are a unique sector because of the wide-ranging daily activities that can generate hazardous waste (pharmaceutical waste, laboratory testing, X-ray, infusion, cleaning/disinfecting, etc.) In addition to hazardous waste, hospitals also manage regulated medical waste (red bag) and radiological wastes that are subject to multiple accreditations and surveys, all while focusing on patient care.
